

Grade 4 Sample Lesson Plan: Disease Simile

Objectives/Goals

- The student will be able to...
 - compare an everyday object to a communicable disease expressing how it affects the body and some distinguishing characteristics of the disease

Materials

- Disease Simile Worksheet
- Scrap paper for brainstorming

Steps

Step 1

• Utilize this performance assessment upon completion of lesson taught on communicable diseases. This cross-curricular literature activity has students work on grammar and literature components relating to writing similes.

Step 2

- Give each student a copy of the Disease Simile Worksheet and scrap paper for brainstorming (they could use the back of the worksheet).
- Read the example provided on the worksheet comparing a communicable disease to a bathtub.
- Ask students if there are other ways the common cold is like a bathtub.

Step 3

- Have the students begin their brainstorming session by coming up with a disease and an everyday object.
- Encourage them to think about an object that they are familiar with and they use in a variety of ways.
- If students are struggling guide them by asking them about the symptoms of the disease. For example, when you have strep your throat is scratchy. Then ask them what 'objects' or 'things' make them scratchy... "When you have strep throat it's like playing in a

sandbox. When you are done and want to go in the house you try to get all the sand off, but it sticky and scratchy."

• A possible variation could be to expand the comparison beyond an object to an event. Like comparing a disease to a dance recital or tornado.

Step 4

• Once they have completed their brainstorming have them write 4-6 complete sentences.

Handout

The next page includes a handout for the lesson. The handout is designed for print use only.

Directions: Compare a communicable disease to an everyday object or life event. Explain in at least 4-6 sentences why the object or event is similar to the disease.

For example:

"Getting a cold is like a bathtub. Bathtubs drain the water and soap after a shower and a cold makes you feel drained of all energy. Often, bathtubs get scummy, slimy, and gross. When you get a cold your nose and throat get full of slimy mucus and boogers. You can fill a bathtub full of hot water which is similar to the body's temperature rising to over 100 degrees when you have a cold."

It's helpful to first think of the characteristics of communicable diseases or think about a specific disease. Make a list of the side effects and then compare it to an everyday item.
